Hello, I am fine...Still recovering from: ps. Happy Thanksgiving (It is canadian Thanksgiving holiday right now still)...CT Scan(chest abdomen pelvic)=Iodine(antidote with Calcium) + Aluminum(antidote with Titanium) injected...Oral Contrast(this was actually a BONE scan they snuck in without telling me) looks like water, was Barium Hydrogen(antidote with Oxygen)... (Brain)MRI was Gadolinium Molybdenum(antidote with Boron) injected (like a microchip material) & Nitrogen N(antidote with Carbon) base also injected during MRI session...The CT scan Iodine inject was chemo level dosage NOT diagnostic level...The Molybdenum Gadolinium was some sort of microchip level amount-so huge it stimulated a new problem in my palate...required at least 12 x 30 mg Boron Bo from Hakala labs...

Note:Sulphur is the word for Sugar on the Periodic Table of Elements...

Garlic is a Selenium, which is opposite to Sugar or the old word Sulphur...

The tiny sweetness in garlic is Sulphur or Sugar...

The majority of garlic is Selenium though, which lowers blood sugar...

Our Grove Health Science Books are actually correct...

I was not aware of the name change from Sulphur to Sugar in recent history...

I have changed the Grove Body Part Chart to reflect the newer more clear word "Sugar"...

The Periodic Table of Elements should change the word Sulphur S to the newer word SUGAR S...
